

The **GAM<sup>®</sup> Certificate Management System (GCMS)** was specifically designed to support value added commercial opportunities such as age, source and process verification.

The **GAM<sup>®</sup> Certificate Management System (GCMS)** is a web based, online application for recording operation (location), owner, animal age, source, and process data for individual or groups of animals, and subsequently generating a certificate that displays such information and can be stored and/or shared within the food supply chain. In addition, the product can be used as a platform for movement verification (NAIS).

**Global Animal Management, Inc. (GAM)** is a wholly owned subsidiary of Schering-Plough Animal Health Corporation providing data management services to the livestock industry. GAM offers products and services for individual or group animal identification, data collection, storage, processing, analysis and reporting. We combine the right people, products and processes to deliver solutions that provide value to our customers to comply with industry regulations or capture commercial market opportunities.

# GAM<sup>®</sup> Certificate Management System (GCMS)

## BENEFITS

The **GAM<sup>®</sup> Certificate Management System (GCMS)** is a comprehensive system that stores and processes information for age, process, source, and movement verification that can be presented in a customized certificate format.

A professional technical staff specializing in database management, system administration, system backups, and business continuity manages **GCMS**.

**GCMS** includes administration functions to personalize your certificates (i.e., logo, color scheme, links, format, content), to support your business needs.

Seamless integration means you can access **GCMS** with one simple sign-on, and all applications are just one click away.

The **GCMS** is easy to use. All you need is a connection to the Internet and a web browser.

Access to **GCMS** is available anytime (24x7x365).

**GAM** products are backed by telephone, field support and service.

## FEATURES

**GCMS** can be “branded” to have the color scheme and images that you would like your customers to see.

The n-tiered architecture of **GCMS** is specifically designed to provide the highest level of security, performance, flexibility and scalability.

**GCMS** is housed at a “tier one” host site, to guarantee maximum connectivity.

Utilizes the Oracle 10g enterprise suite of products.

Incorporates “best of breed” business intelligence tools that allow you to create and work with reports in a dynamic fashion.

All content is protected by VeriSign’s SSL secured (128 bit encryption) certificates.
